SOFTWARE ENGINEER

Software engineer with production enterprise experience at Publix and hands-on proof building local workflow automation systems. Strong fit for Miami, South Florida hybrid, and remote roles involving business-critical software, internal tools, QA automation/SDET, data/BI workflows, platform automation, and practical AI-assisted systems. Known for bringing structure, reliability, and reviewable automation to messy operational workflows.

CORE SKILLS

- Engineering: C#/.NET, Python, TypeScript, React, Next.js, REST APIs
- Cloud/Data: Azure Data Lake, Azure Databricks, Azure DevOps, Snowflake, Power BI
- QA/Automation: Playwright, Selenium, Azure Pipelines, YAML, CI/CD automation
- Workflow Systems: PowerShell, JSON, CSV, Markdown, local-first automation, approval queues, application-field mapping
- Product Strengths: internal tools, business workflow debugging, business-critical reporting workflows, human-in-the-loop automation, systems thinking, reliability-minded delivery

PROFESSIONAL EXPERIENCE

Publix Super Markets

Associate Software Engineer | 2022 - Present

- Supported production enterprise software workflows in a large retail environment, balancing reliability, maintainability, business continuity, and user impact.
- Built and maintained data/reporting workflows using Azure Data Lake, Databricks, Power BI, and related cloud tooling for business-critical reporting needs.
- Developed and supported automated QA workflows with Playwright, Selenium, Azure Pipelines, and YAML-based CI/CD scheduling to improve release confidence.
- Helped debug, document, and improve established internal systems where careful changes, regression awareness, and clear communication were critical.
- Contributed to modernization/remodel work across existing software systems, pairing production-support discipline with workflow, data, and automation improvements.

Florida State University

STEM Course Instructor | 2019 - 2022

- Instructed and mentored 200+ students annually in math and computer science while completing an undergraduate degree.
- Helped students understand analytical and programming concepts through clear examples, practice support, and problem-solving guidance.

SELECTED PROJECTS

Local Workflow OS / Career Forge

Local-first workflow system for structured job search, role scoring, approval queues, browser/application-page inspection, and human-reviewed automation.

- Built a local C#/.NET and PowerShell workflow OS that organizes job search, application tracking, decision gates, approval queues, and review workflows through local files.
- Developed an AI-assisted job-search pipeline that sources roles, scores fit, maps application surfaces, and generates prioritized application queues across ATS and company career pages.
- Created browser form-capture tooling with Microsoft Edge DevTools Protocol concepts to inspect application pages, detect fields, buttons, upload inputs, and risk signals without submitting data.
- Designed human-in-the-loop approval boundaries so automation can prepare drafts and decision packets without submitting applications, uploading files, sending messages, creating accounts, or answering legal questions.
- Added local status/reporting flows using JSON, CSV, Markdown, PowerShell scripts, and a native Windows launcher.

MarceloZapata.dev Portfolio

Personal software engineering portfolio for data systems, automation, tools, and selected projects.

- Presents engineering work across workflow tools, data systems, automation, and practical interfaces.
- Use as the public proof surface for Local Workflow OS, Green Machine, GateKPT, Rally, and selected engineering projects.

EDUCATION

Georgia Tech | Master's in Artificial Intelligence | 2024 - 2027

Florida State University | Bachelor's in Computer Science and Business | 2019 - 2022
